

that have migrated prior to 2010. The program intervention could focus on building individual and family resilience through multifamily group meetings or other forms of intervention. These interventions could be implemented by social science students in order to avoid high costs of interventions and could initially target the vulnerable groups with interventions. Research level recommendations focus on implementation of action oriented research in understanding individual and family resilience factors among returned migrants and accordingly develop and evaluate interventions that promote individual and family resilience as asset to overcome potential hardships or return migration.
